**Tanktop**

The **Atkinson Tanktop** has been designed and developed for the oil heating industry by **Atkinson Equipment Ltd.**

This new initiative product has all the components required for drawing fuel oil from the top of the storage tank in one unit. The Tanktop is the only top off take that has all six components in one product:

1. Floating suction line .
2. Non-return Valve.
3. Fully serviceable filter system.
4. Anti-Siphon valve.
5. Easy prime button.
6. 10mm Push fit pipe connection.

With top off take it is imperative that joints are well made, so with only one push fit joint to make, Tanktop is the answer to an engineer's dreams.

The Tanktop is installed in conjunction with a de-aerator (Tigerloop) or oil lifter. (Two pipe systems from and back to the Tank is not recommended).

This unique product is protected by design certificates No 000472493-0001.

Atkinson Equipment has 40 years experience in design and manufacture of products for the Oil Heating Market and has involved Burner Manufacturers, Tank Manufacturers and Heating Engineers in the final design of the Tanktop to ensure that the product is compatible with their equipment and installation methods. The Tanktop has a built in anti-siphon valve to prevent fuel siphoning from the tank in the event that the oil line is compromised, thus avoiding environmental pollution. Environment Agencies and OFTEC (Oil Firing Technical Association) recommend top off take with all these built in features.

# Tanktop

**Specifications/Standard Features:**

- Diaphragm Anti Siphon Valve Factory set to 150mb(1.5m negative head)
- Tanktop's can be factory set up to 4m negative head on request*
- Anti Spill Valve
- Non Return Valve
- 50 Micron Filter
- PVC/Nitrile Floating Suction Tube
- Floating Aluminium Fuel Pick Up
- Purging/Priming Button
- Tank Inlet Fitting 1" BSP With Surface Gasket
- Weatherproof Cap Optional/Standard (dependant on model and fitmet)
- EC registered design number: 000472493-0001
